MAXIMUM ANTI-BURGLARY PROTECTION AND BULLET RESISTANCE PERFECTLY COMBINED

Looking for anti-burglary protection for areas with increased security requirements? Then you have found it with our **SAFELINE RC5** sectional door.

With this protection class, museums, valuables storage facilities, government buildings, prisons and research establishments are protected to perfection. This door, which is DIN-tested and certified, will stand up to even an experienced perpetrator with sophisticated tools. What is more, the **SAFELINE 80 RC5** sectional door can be equipped with bullet-resistant properties in resistance class FB4 NS in accordance with DIN EN 1522, guaranteeing reliable protection against small arms fire and dangerous splintering.

The RC5 sectional door, the largest in the world, is unique in Europe. We have already demonstrated our expertise when it comes to anti-burglary protection, with our RC5 sectional door providing the very highest security at the National Museum in Oslo.

Benefits at a glance

- ✓ RC5 anti-burglary protection rating
- ✓ Suitable for different construction situations thanks to great flexibility
- ✓ Glazed sections for greater design flexibility and more daylight, also possible up to RC4
- ✓ Clear width and height tested and certified up to 8,000 x 8,000 mm
- ✓ Combination with class FB4 (NS) bullet resistance possible

Resistance class RC5

Our products with an RC5 rating offer you maximum security against extremely experienced burglars. They have been tested in accordance with the DIN TS 8194:2020-07 European standard and will withstand break-in attempts with sophisticated tools such as drills, reciprocating saws and angle grinders for a period of 60 minutes with 15 minutes per attack point.

Bullet resistance class FB4 NS

“FB4 NS” is a resistance class for doors offering ballistic protection in accordance with EN 1522. “FB” indicates bullet resistance and “4” the resistance class, while “NS” means that, if the door is hit, there will be no splintering on the protected side. Doors in this class provide protection against bullets fired from small arms, such as a .44 Magnum, and prevent splintering in order to safeguard people and sensitive areas.
